PARTNER VISION · DISCUSSION DRAFT

FACES × CRISALIX

Turning the clinic journey into treatment growth.

A high-level vision for connecting Faces' clinic workflow with Crisalix's 3D visual experience — helping practices identify, explain and upsell the right treatments with more patient confidence.

Intent

captured before visit

3D

visual consultation

Upsell

treatment discovery

TWO STRONG BRANDS, ONE RICHER JOURNEY

A combined product experience that elevates both platforms.

CLINIC WORKFLOW

Faces is where clinics already manage the patient relationship.

Bookings, consent, forms, payments, products and practice workflows create repeated moments where patients and clinics are already engaged.

- 1 High-frequency touchpoints before, during and after appointments.
- 2 Structured patient information that can reveal treatment intent.
- 3 A natural surface for treatment discovery and follow-up offers.

3D VISUAL EXPERIENCE

Crisalix makes treatment opportunities easier to see and explain.

3D self-assessment and visual consultation turn abstract interest into concrete, personalised treatment conversations.

- 1 Patients express aesthetic priorities through visible facial areas.
- 2 Practitioners can connect recommendations to what patients see.
- 3 Cross-sell and combination treatments become education-led.

Together: a premium treatment-growth layer inside the workflow clinics already use.

The partnership can help clinics move from isolated appointments to guided treatment journeys: better preparation, stronger recommendations, higher average treatment value and recurring follow-up.

TREATMENT GROWTH ENGINE

Use patient intent to recommend more — without making it feel like selling.

The opportunity is not only a better consultation. It is a smarter commercial journey: identify what the patient cares about, show the opportunity visually, and guide them toward primary, complementary and maintenance treatments.

1

Capture intent

Forms, consent and 3D self-assessment reveal patient priorities before the appointment.

2

Map opportunities

Concerns become treatment categories, combinations and future care paths.

3

Explain visually

3D context helps patients understand why a recommendation is relevant.

4

Follow up

Aftercare, reminders and next-best treatments extend revenue beyond one visit.

A PRAGMATIC PATH FORWARD

Start simple, prove value, then expand the journey.

LAYER 1 · PROTOTYPE

3D self-assessment in the Faces flow

- Guided photo capture
- Facial-area prioritisation
- Patient concerns before visit
- Clinic review surface

Immediate value: better prepared consultations.

LAYER 2 · PRODUCTISATION

Visual consultation support

- Clear treatment discussion
- Area-based recommendations
- Combination treatment planning
- Education-led conversion

Commercial value: clearer recommendations and higher trust.

LAYER 3 · EXPANSION

Long-term patient relationship

- Follow-up journeys
- Progress and maintenance
- Personalised content
- Future treatment discovery

Strategic value: retention, recurrence and patient lifetime value.
