

FACES × CRISALIX

Elevating the consent form into the intelligent patient journey.

Helping clinics understand patients better. Helping patients make better decisions. Creating lifelong relationships.

THE VISION

The consent form is already at the center of the patient journey.

Today, Faces owns the operational touchpoint.

Patient information, medical history, consents, documentation, payments and clinic workflows.

Crisalix adds the visual intelligence layer.

3D preview, facial-area prioritisation, patient concerns and treatment-opportunity discovery.

Together, it becomes more than consent.

A communication platform, education platform and AI recommendation engine.

The result: a growth engine for clinics.

Better consultations, more trust, stronger conversion and repeat engagement.

THE INTELLIGENT 3D CONSENT FORM

Better understanding. Better conversations.

Patients create a personalized 3D preview from home, directly inside the familiar Faces consent flow.

- 1 Capture three guided photos.
- 2 Rank eight facial areas from favorite to least favorite.
- 3 Share area-specific concerns before the appointment.

Patients

More confidence, more clarity and better preparation.

Clinics

Richer context before the consultation starts.

Complete consent form
Please read the disclaimer and answer all questions accurately.

Dermal Filler Disclaimer

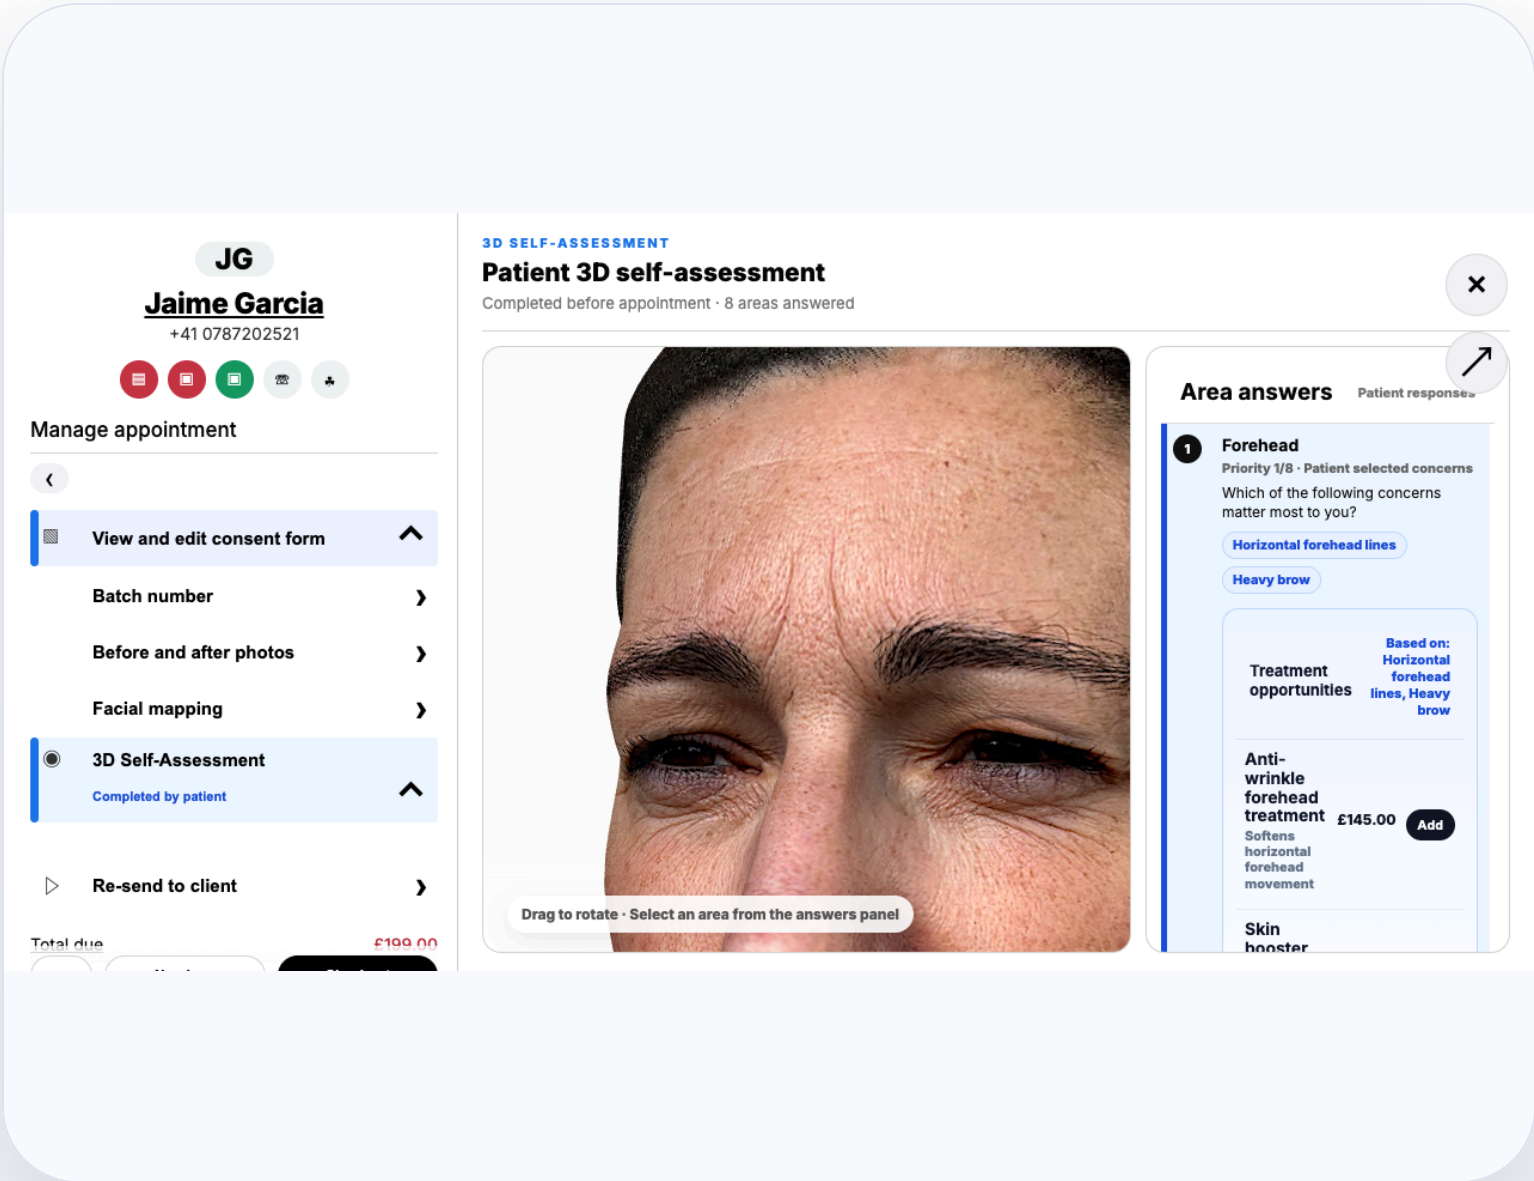

PATIENT CONSENT: This is an informed consent form that has been prepared to help inform you of the potential benefits and risks of dermal filler injections. It is important that you read this information carefully and discuss fully with your practitioner bef...

Create your 3D preview
Powered by Faces
Start with 3 quick photos so your clinic can better understand your facial features and personalize your consultation.

Front photo
First, take your front photo
Look straight ahead and align your face with the outline. When you're ready, tap the capture button.

AI-POWERED TREATMENT RECOMMENDATIONS

Turning patient insights into personalized opportunities.

01
Patient answers become consultation context.
The clinic sees priorities and selected concerns alongside the 3D review.

02
Recommendations become easier to explain.
Primary, complementary and combination treatments can be tied to what the patient already expressed.

03
Upsell becomes education-led.
Better planning, trust and higher revenue per patient.

THE GAMIFIED PATIENT JOURNEY

From a single consultation to a lifelong relationship.

After treatment, Faces and Crisalix can continue engaging patients with education, progress, reminders and adaptive recommendations over time.

1

Personalized tips

Education and guidance based on the patient's assessment.

2

Progress tracking

Follow-up assessments and visible milestones.

3

Maintenance journeys

Reminders for products, memberships and treatment plans.

4

Adaptive AI

Recommendations evolve as the patient's needs change.

Horizontal forehead lines

Heavy brow

REIMAGINING AESTHETIC PATIENT ENGAGEMENT

The partnership can roll out in three product layers.

PHASE 1 · NOW

Intelligent 3D Consent Form

- Embedded 3D capture
- Eight-area prioritisation
- Patient concerns before visit
- Clinic review surface

Better understanding before the consultation.

PHASE 2 · NEXT

AI Treatment Recommendations

- Primary procedures
- Complementary procedures
- Combination plans
- Maintenance treatments

More comprehensive treatment planning.

PHASE 3 · FUTURE

Lifelong Patient Companion

- Follow-up journeys
- Education and content
- Milestones and reminders
- Adaptive recommendations

From single treatments to lifelong relationships.
